Roadmap — Apartment Ranking Platform

Stages each company moves through

1. empathy
2. Stickiness
3. Virility
4. Revenue
5. Scale

PRE-REQ STAGE 1 — EMPATHY

Are you solving a real problem for a real person?

OMTM: Number of users who confirm the problem is real and painful without being prompted

INTRO

- [ ] Complete Lean Canvas before building anything
- [ ] Write one-sentence positioning statement
- [ ] Write founder origin story
- [ ] Set your One Metric That Matters (OMTM) — suggested: % of users returning within 7 days

Lean Canvas

Block	Question	Answer
Problem	What problem do renters actually face?	
Customer Segment	Who exactly is the customer?	
UVP	Why are you different from Apartments.com, Roomster,	

	Facebook?	
Channels	How will you reach them?	
Revenue Streams	How will you make money?	
Cost Structure	What does it cost to run?	
Metrics	What numbers prove you are making progress?	
Unfair Advantage	What can competitors not copy?	

STEPPS Test — Run Every Piece of Content Through This

Principle	Question to Ask
Social Currency	Does this make the audience look smart or in-the-know?
Trigger	Is this attached to a moment renters already experience?
Emotion	Does this produce a high-arousal emotion (awe, outrage, excitement)?
Public	Can others see people engaging with it?

Practical Value	Does this save time, money, or stress?
Story	Is this worth retelling?

STEP 1 — LEGAL

Phase 1 — Formation (Do This First)

- [ ] Check business name availability (secretary of state website)
- [ ] LLC formation — do not use your real name in the LLC name
- [ ] Buy operating agreement
- [ ] Buy virtual address — use for all business registration, not your home
- [ ] Get EIN from IRS — free at irs.gov, do not pay a third party
- [ ] State tax ID (check if your state requires one separately)

Phase 2 — Banking & Finances

- [ ] Business bank account — open only after LLC and EIN confirmed
- [ ] Business credit card
- [ ] Accounting software — QuickBooks or Wave as free alternative

Phase 3 — Legal Protections (Before First User)

- [ ] Terms of Service
- [ ] Privacy Policy
- [ ] FCRA + Fair Housing lawyer consult — critical before background checks go live
- [ ] Build compliant authorization flow — users must explicitly consent to background checks

Phase 4 — Insurance

- [ ] General Liability Insurance
- [ ] Cyber Liability / Data Breach Insurance — you are storing personal user data, this is not optional

Phase 5 — Brand Protection (After Validation)

- [ ] Trademark search — do before investing heavily in brand
- [ ] Trademark registration — wait until product is validated and revenue is coming in

Phase 6 — Scale (Around 3 Months In)

- [ ] Hire accountant
- [ ] Sales tax planning — especially if operating across multiple states
- [ ] S-corp election consideration — can reduce self-employment tax at higher revenue
- [ ] QSBS planning — significant tax benefit if structured early, talk to a lawyer
- [ ] Clean up corporate records

STEP 2 — SOCIAL MEDIA SETUP

Platform Schedule

Business schedule (3-5x/week)

- Podcast (1-2x)
- Spotify podcast
- Instagram
- TikTok
- Reddit

Personal

- LinkedIn
- Twitter/X

Normal Operations — Weekly Schedule

Day	Action
Saturday	Write overview and outline for the week's episode
Sunday	Record podcast session for the week
Monday	Post episode to Apple and Spotify — get transcript — break into 3–5 parts — write posting schedule
Mon–Fri	Post parts to YouTube Shorts, Instagram Reels, Facebook,

	Reddit — post transcript to Reddit and website
Daily	Write daily blog post about rankings linking to YouTube and other channels
After 24hrs	Write down how each channel performed — note time spent on each task
Throughout week	Note anything that surprises you
End of week	Take that data — discuss it on LinkedIn and Twitter

Apartment Series — Weekly Schedule

Day	Action
Saturday	Plan which complexes to visit — schedule them
Weekdays	Go in person and record using Meta glasses (POV)
Weekdays	Read reviews — rank each complex — assign categories
Weekdays	Publish videos to business social media
Weekdays	Write daily blog post linking to YouTube
Weekdays	Note interesting things about

	each complex
Saturday	Create podcast outline — surprises, shocks, ranking changes, links to other channels

Website must send an email when rankings change if a user has rated that complex. Email must include viral footer tagline.

Weekly Content System — One Recording, Ten Assets

Step	Action	Tool
1	Record on location	Meta glasses(POV)
2	Transcribe	Descript, Otter.ai, or Whisper
3	Cut short-form clips	Opus Clip or Castmagic
4	Write blog post from transcript	Custom website
5	Pull 3–5 tweet-sized insights	Manual
6	Build carousel or data graphic	Canva
7	Post full video to YouTube, clips to TikTok/Reels/Shorts	Buffer or Later
8	Send weekly newsletter with	Beehiiv or ConvertKit

	leaderboard update	
9	Log metrics in tracking spreadsheet	Google Sheets

Each Episode Must Include

Element	What It Means
Inner Remarkable	What is surprising or counterintuitive about this complex?
Game Mechanics	Tease ranking changes, build stakes ("Will this complex hold #1?")
Insider Feeling	Give exclusive info regular renters don't have
High-Arousal Emotion	Shock at bad value, excitement about a hidden gem, outrage at misleading listings
Call to Investment	Rate this complex, join the leaderboard, nominate your building

Tool Stack

Function	Options

Transcription	Descript, Otter.ai, Whisper
Short-form clipping	Opus Clip, Castmagic
Scheduling	Buffer, Later, Hypefury
Email	Beehiiv, ConvertKit
Blog/SEO	WordPress or Webflow
SEO Setup	Google Search Console (submit sitemap day one)
Analytics	Google Sheets + Mixpanel or PostHog
Community	Circle, Discord, or Notion (gated)

PRIVATE COMMUNITY & GAMIFICATION

This is your atomic network — the smallest stable group from which all growth is built.

- Build a private page (Discord)
- Build a website with the rankings
- Tease rankings before publishing to create anticipation
- Build leaderboards by city, price range, and amenity type
- Allow logged-in users to submit ratings based on your videos
- Notify users when a complex they rated moves up or down
- Members who rank in first 30 days get "Founding Rater" status — make it visible

STEP 3 — TEST TRACTION CHANNELS (30 Days)

GOAL AT TRACTION STAGE

- ◯ Find 1-2 channels that can generate leads

Rules:

- 50% of time on traction testing, 50% on building
- Test all 19 channels in parallel with minimal spend
- Every channel funnels to one collection point — email or phone number

- Do not optimize a channel until you have proven signal

Before Investing More in Any Channel, Answer These

Question	Why It Matters
How much will it cost to acquire a customer?	CAC must stay low
How many customers are available?	Market size check
Are these the customers I want right now?	Quality over quantity

19 Channels — Ideas and Tracking

#	Channel	Starter Idea	Signal?	Cost	Quality
1	Blogs	"10 Most Overrat-ed Apart-ments in [City]"			
2	Publicity	Pitch local news about ranking every apart-			

		ment	
3	Uncon-ventional PR	"Worst Apart-ment Value of the Month" award	
4	SEM	$50 Google Ads — "[City] apart-ment reviews"	
5	Social Display Ads	"We ranked 50 apart-ments" → email capture	
6	Offline Ads	Flyers at colleges and cowork-	

		ing spaces	
7	SEO	Individual ranking page per complex	
8	Content Marketing	Weekly "Apartment of the Week" from video	
9	Email Marketing	Weekly newsletter — never buy lists	
10	Engineering as Marketing	Free "Apartment Value Score Calculator"	

11	Viral Marketing	"Nominate Your Complex" campaign	
12	Business Development	Partner with relocation companies and HR depts	
13	Sales	Manually DM people in rental Facebook groups	
14	Affiliate Programs	Partner with renter's insurance or movers	

		movers	
15	Existing Platforms	Cross-post rankings on Apartments.com, Google Maps	
16	Trade Shows	Property management meetups with printed leaderboard	
17	Offline Events	"Best Apartment in [City]" local meetup	
18	Speaking Engagements	University housing	

	ments	heading offices and corpo-rate HR
19	Commu-nity Building	Discord where rankings drop first

AARRR Metrics

Stage	Metric	Target
Acquisition	Visitors per week by channel	Track per channel
Activation	% who rate an apartment or complete profile on first visit	>20%
Retention	% who return within 7 days	>30%
Revenue	Trial-to-paid conversion	10–20% no card / 40–60% with card
Referral	Referrals per paying user	>0.5 to start

STEP 4 — BUILDING A COMMUNITY

It’s time to cultivate a community.

GOAL AT COMMUNITY STAGE

- [ ] Gain 50 people who are actively ranking the leaderboard

THE GOAL OF BUILDING A COMMUNITY

Stage	Discord Size	What It Means
Atomic Network	10–20 members	Leaderboard feels real, founding raters are active
Tipping Point	50 members	Enough social proof to recruit strangers organically
Launch Ready	50–100 members	Product sells itself, you open the doors

WHO ARE YOUR POWER USERS

User Type	How to Identify Them	How to Treat Them
Whales	Rated multiple apartments, referred others, DM'd you unprompted	Give direct access to you, involve in decisions
Dolphins	Engaged consistently,	Nurture toward whale behavior with

	opened every email, commented regularly	exclusive access
Minnows	Signed up but passive	Let the product convert them — do not spend personal time here

Focus all personal energy on whales and dolphins. Ignore minnows at this stage.

THE INSIDER SYSTEM

Make power users feel like they are building this with you — because they are.

Action	Purpose
Give them a name — "Founding Rater" or "Insider"	Identity they want to claim publicly (Social Currency)
Show their badge visibly on the leaderboard	Others see it and want it (Public — Contagious)
Share rankings with them 24–48 hours before public release	Exclusive access they can use as social currency
Ask them to nominate the next apartment complex to review	Investment — they are now co-creators, not just users
Send them a personal voice note or video when you review their nominated complex	Makes them feel seen — they will tell everyone
Create a private Discord channel just for Founding Raters	Scarcity + insider access drives desire to get in

Filter out the founding members by those looking for a roommate	Target audience
For those looking for a roommate, invite them to review the early pen and paper app you are putting together	Get feedback

The goal is variable reward — they never know exactly what they will get or when, but they know it will be worth checking.

Community Metrics to Track

Metric	What It Tells You
Return visit rate within 7 days	Stickiness
Apartments rated per user	Investment depth
% of users who refer at least one person	Early viral coefficient

Hooked Cycle Check

Phase	Question
Trigger	Is there a clear external trigger driving first visit?
Action	Can a user rate an apartment in under 60 seconds?
Variable Reward	Is there a leaderboard surprise that makes users return?
Investment	Is there an action (rating, profile) that increases cost of

leaving?

Stickiness Metrics

Metric	What It Tells You	Target
Return visit rate within 7 days	Core stickiness signal	>30%
Apartments rated per user	Investment depth	>2 per user
% of users who refer at least one person	Early viral signal	>10%

STEP 5 — INTERVIEW USERS (Mom Test)

Never ask if they like your idea. Ask about their life.

Goals:

- [ ] Interview at least 25 users looking for roommates in the Bay Area
- [ ] Get 25 users to test the pen and paper method
- [ ] Have 25 users step through the design with simple animated screens
- [ ] Have 25 users conduct usability tests on the app
- [ ] Redesign constantly based on findings
- [ ] Ensure revenue models make sense and users are ready to pay

Interview Checklist

Step	What to Do
Find subjects	Most engaged users who are

	looking for roommates— commented, signed up, DM'd, rated
Reach out	Personal message, not a form
Ask	Their last real experience finding a roommate
Ask	What was hardest — let them finish without steering
Ask	What tools they used and what they hated
Ask	How much time and money it cost
Use	5 Whys — ask why 5 times to reach the root
Never	Mention your product until they have told their full story
After 10–15 interviews	Find the pattern that appears 80% of the time

If users are not naming these unprompted — dig deeper or reconsider positioning.
Never ask if they like the product. Watch what they do and ask about their life.

Questions

Question to Ask	What You Are Learning
Walk me through the last time you looked for a roommate	Real pain, real timeline, real cost
What did you use and what did	Competitive weaknesses to

you hate about it	exploit
What made you open our app/ site more than once	What is actually sticky vs what you assumed was sticky
What would make you tell a friend about this	Your word-of-mouth trigger, straight from the source
What would make you pay for this — and what would you expect to pay	Pricing signal and value perception
What would make you stop using this	Your biggest churn risk

Run 5 Whys on every interesting answer. The first answer is never the real answer.

3 Internal Triggers to Validate

Trigger	Signal It Is Real
Fear of not finding a roommate in time	Users say this unprompted
Anxiety about overpaying for rent	Users reference cost without being asked
Fear of a bad living situation	Users describe past horror stories

Gate to Pass Before Moving to Stage 2

- ◯ Interview 25 users
- ◯ 80% of interviews surfaced the same problem
- ◯ Willingness to pay

STEP 6 STAGE 2.0.1 Stickiness 1 — RANKING

Are people coming back to the rankings without being prompted?
OMTM: % of community members who return to check the leaderboard within 7 days

What You Are Building

What	Why It Matters
A leaderboard with enough ratings to feel real	Empty leaderboards have no pull — you need density
A notification system that triggers return visits	Passive re-engagement without manual effort
A content rhythm that creates weekly anticipation	People should expect something new every week
A community where being active has visible status	Public participation creates social pressure to return

Stickiness Checklist

Task	Done?
Leaderboard has ratings from at least 10–20 real users	
Website sends email notification when rankings change	
Notification includes viral footer tagline	
Founding Rater badges are visible on the leaderboard	
New rankings drop on a predictable schedule (creates anticipation)	

anticipation)	
Rankings are teased 24–48hrs before publishing to Founding Raters	
At least one shocking or surprising ranking revealed per week	
Blog posts are live and indexed on Google Search Console	

Hooked Cycle Check — Rankings Product

Phase	Question	Target
Trigger	Are users receiving a notification that pulls them back?	Email open rate >30%
Action	Can a user check the leaderboard in under 30 seconds?	Yes — zero friction
Variable Reward	Does the leaderboard show something new or surprising each visit?	At least 1 ranking change per week
Investment	Have users rated apartments, making the leaderboard feel partly theirs?	>2 ratings per active user

Stickiness Metrics

Metric	Target	Notes
Return visit rate within 7 days	>30%	This is your gate
Apartments rated per user	>2	Below this the leaderboard feels thin
Email open rate	>30%	Below this your trigger is broken
% who refer at least one person	>10%	Early signal for Virality 1

Gate to Pass Before Moving to Virality 1

- ◯ 30%+ return visit within 7 days unprompted
- ◯ At least 20 users have rated at least 2 apartments
- ◯ Ranking change weekly

STEP 6.5 STAGE 3.0.1 Virality 1 — Content

Are people sharing the rankings without being asked? OMTM: Viral coefficient — target above 1

3 Types of Virality to Check

Type	How It Applies to Rankings
Inherent	Does sharing a leaderboard link naturally show the product to someone new?
Artificial	Does the "Nominate Your Complex" campaign incentivize sharing?

Word of Mouth	Are people telling friends about a shocking ranking unprompted?

What Drives Virality for the Rankings

Driver	How to Activate It
Shocking ranking reveal	"The most expensive complex in the Bay Area ranked dead last for value" — outrage spreads
Nominate Your Complex	Renters tag their building publicly to get it reviewed — inherent public visibility
Founding Rater badge	People show off the badge — others ask how to get it
Leaderboard link in every email	Every notification is a shareable artifact
Viral footer on every outbound email	"Sent from [app]" on every ranking notification
Rankings on existing platforms	Cross-post to Apartments.com, Google Maps, Yelp — content finds new audiences passively

Virality Metrics

Metric	Target	Notes
Viral coefficient	Above 1	Each user brings in more than 1 new

		user
Viral cycle time	As short as possible	Time between a user joining and their referral joining
Leaderboard link shares per week	Track and grow	Baseline in week 1, double by week 4
"Nominate Your Complex" submissions	Growing weekly	Stagnation means the campaign needs a refresh

Virality Checklist

- ◯ Leaderboard link is easy to copy and share in one click
- ◯ Every ranking notification email has a share button
- ◯ Viral footer tagline on all outbound emails
- ◯ "Nominate Your Complex" campaign live across all channels
- ◯ At least one shocking ranking published and promoted
- ◯ Rankings cross-posted to Apartments.com, Google Maps, Yelp
- ◯ Viral coefficient being tracked weekly
- ◯ Viral cycle time being tracked weekly

Gate to Pass Before Moving to Prelaunch

- ◯ Viral coefficient above 1 for content
- ◯ New users arriving without paid spend
- ◯ At least one piece of content has spread organically

STEP 7 — PRELAUNCH

Pull roommate-seekers from the community, co-build the app with them, validate willingness to pay.

Prelaunch is not a stage. It is a transition. You have a content audience that is sticky and spreading. Now you reach into that audience, find the people who are actively looking for a roommate, and use them to co-build and validate the actual app before you build it fully.

GOAL AT PRELAUNCH STAGE

- [ ] Get a group of 10-20 users that are actively seeking roommate and ready to pay in the Bay Area

How to Identify Roommate-Seekers Inside Your Community

Signal	What It Means
They mentioned moving or relocating in comments or DMs	Active need right now
They rated apartments in a specific price range consistently	They are shopping, not browsing
They asked questions about specific neighborhoods	They are close to making a decision
They DM'd you directly without being prompted	Highest intent — contact these first

Co-Building Process

Step	Action
1	Identify 10–20 roommate-seekers from your community
2	Reach out personally — not a form, a real message
3	Invite them into a private Discord channel for co-builders

4	Walk them through the pen and paper version of the app
5	Watch them use it — do not help them
6	Note every place they hesitate or get confused
7	Show them simple animated screens of the design
8	Watch again — do not help
9	Redesign based on what you saw — not what they said
10	Repeat until 70%+ complete core action without help

Validating Willingness to Pay

Step	Action
1	At the end of co-building, tell them you are building background check and credit score features
2	Offer access for $50 — Venmo or Stripe link, no payment flow needed
3	If they pay without hesitation, you have a business

4	If they hesitate, ask why — that answer is worth more than the $50
5	If fewer than 3 of 10 pay, return to interviews before building anything

Frame the offer around the outcome: "Know exactly who you are moving in with before you sign a lease — for $50 we handle the full background check so you never have to wonder."

Prelaunch Checklist

- ◯ 10–20 roommate-seekers identified from community
- ◯ Each one contacted personally
- ◯ Private co-builder Discord channel created
- ◯ Pen and paper walkthrough completed with each
- ◯ Animated screen walkthrough completed with each
- ◯ Usability test on rough app completed with each
- ◯ At least 3 of 10 paid $50 without hesitation
- ◯ Core pain confirmed — 80% named same problem unprompted
- ◯ Redesign completed at least once based on observations

Gate to Pass Before Moving to Stickiness 2

- ◯ Manual payments collected at least 3 of 10 pay without hesitation
- ◯ Co-builders active 10–20 roommate-seekers engaged
- ◯ 70%+ complete without help

STEP 8 STAGE 2.0.2 Stickiness 2 — App

Are roommate-seekers coming back to the app without being prompted? OMTM: % of app users who return within 7 days unprompted

Hooked Cycle Check — Roommate App

Phase	Question	Target
Trigger	Does the user feel anxiety about finding a roommate when away from the app?	Confirmed in interviews
Action	Can a user browse and message a potential roommate in under 2 minutes?	Yes — zero friction
Variable Reward	Does each session surface a new potential match they haven't seen?	New matches visible on every visit
Investment	Has the user built a profile that makes leaving feel costly?	Profile completion >80% of active users

Internal Triggers to Activate

Trigger	How to Use It
Fear of not finding a roommate in time	Send a notification when a new user matching their criteria joins
Anxiety about overpaying	Show them the cost comparison of living alone vs with a roommate
Fear of a bad living situation	Surface background check

	feature at the moment they find an interesting match

External Trigger Schedule

Timing	Trigger
When a new match joins their area	Push notification — "Someone new just joined who matches your criteria"
Sunday evening	"3 new people are looking in your area this week"
First of the month	"Leases start soon — here are your top matches right now"
When a match views their profile	"Someone looked at your profile — see who"

Stickiness 2 Metrics

Metric	Target	Notes
Return visit rate within 7 days	>30%	Same gate as content — now applied to app
Profile completion rate	>80%	Incomplete profiles = low investment = high churn
Messages sent per active user	>3 per week	Below this the app is browsed not used
Churn	Under 5%/month	Start measuring this now

Gate to Pass Before Moving to Virality 2

- ◯ Return visit rate 30%+ within 7 days unprompted
- ◯ 80%+ of active users of profiles completion
- ◯ Messages sent, Users are actively communicating, not just browsing

STEP 8.5 STAGE 3.0.2 Virality 2 — App

Does the roommate app grow on its own? OMTM: Viral coefficient — target above 1

3 Types of Virality for the App

Type	How It Applies
Inherent	Does using the app naturally expose it to others? (e.g. sharing a profile link, showing a match to a friend)
Artificial	Does a referral feature unlock something valuable? (e.g. free background check credit for referring a friend)
Word of Mouth	Do users tell others because the app genuinely solved a painful problem?

What Drives Virality for the App

Driver	How to Activate
Profile sharing	Users can share their roommate profile link publicly on social media
Referral credit	Refer a friend, both get a discount on their next

	background check
"Found my roommate on [app]" story	Prompt users who matched to share their story — high emotion, high shareability
Behavioral residue	"Background check powered by [app]" visible on every completed check
Roommate match announcement	Give users a shareable card when they find a match — like a LinkedIn "new job" post

Virality 2 Metrics

Metric	Target	Notes
Viral coefficient	Above 1	Each user brings in more than 1 new user
Viral cycle time	Track and shorten	Time between user joining and referral joining
Referral conversion rate	>25%	Of users who share, how many result in a signup
Organic signups as % of total	Growing	If paid spend is the only source, virality is not working

Gate to Pass Before Moving to Revenue

- [ ] 1 or above Viral coefficient

- [ ] New users arriving without paid spend
- [ ] At least one "found my roommate" story shared publicly

STEP 9 STAGE 4 — Revenue

Can you make money in a scalable, consistent way? OMTM: MRR growth month over month — target 20%

Pricing Principles

Principle	What It Means
Never underprice	Underpricing signals weakness — users think the product cannot be that good
Never overprice without proof	Price must match perceived value — validate before raising
Charge what it's worth	"Charge as high as you can with a straight face without cracking a smile"
Frame around dream outcome	Price the result, not the feature

Revenue Model

Tier	Who It Is For	Price Signal
Free	Curious users — browse profiles, see rankings	Converts passively
Paid	Serious buyers — background checks, verified profiles, priority	$50 per check or monthly subscription

	profiles, priority matching	
Power users	Whales — full verification suite, unlimited checks, premium visibility	We'll have to think about what features this will include

SaaS Health Targets

Metric	Target	Notes
Churn	Industry average is 15% — beat it	Churn will be high, this product is designed similar to Hinge in the sense that we want you to find your roommate asap
Serious buyers	20% of users	Focus all personal energy here
Casual users	20% of users	Nurture toward serious
Curious users	60% of users	Let the product convert them passively
MRR growth	20% month over month	Best in class benchmark
Trial to paid — no credit card	10–20%	

Trial to paid — with credit card	40–60%	

Path to $1M ARR

Month	MRR Target	Users Needed at $50/mo
1	$150	First paying user
3	$560	~11
6	$2,500	~50
9	$10,375	~207
10	$20,750	~415
11	$41,500	~830
12	$83,000	~1,660

Gate to Pass Before Moving to Scale

Condition	Target
Manual payments collected	At least 3 paying without hesitation
Churn	Under 5% per month
Revenue model confirmed	Users are paying and returning
MRR growing	20% month over month

Launch Checklist

Task	Done?
100 engaged users on waitlist or community	
10–20 power users identified	
Power users given name,	

badge, visible status	
Willingness to pay validated	
Offer framed around outcome not feature	
All 19 channels activated for 48-hour launch push	
Behavioral residue set up on all outbound	
Next milestone defined	
Subscription model structure mapped out	

STEP 10 STAGE 5 Scale

Systematize everything. Hire. Expand. Build something that runs without you. OMTM: MRR and month-over-month growth rate

Roles — Founder-Led Setup

Role	Owner	What Good Looks Like	Key Metric
Product	You	3+ user conversations per week	Interviews per month
Engineering	You	Stable app, ships weekly	Uptime %, weekly deploys
Marketing	You	50+ new contacts per week	New qualified leads/week

Sales	You	Personally onboard every early user	Trial-to-paid %
Design	You	Users complete core action without help	Task completion rate
Support	You	Under 2-hour DM response	Response time, CSAT
Finance	Spreadsheet	Weekly P&L, know burn and runway	Monthly burn, runway
Legal	ToS template	Privacy policy, ToS, entity formed	Checklist complete

First Real Hires — In Order

Order	Role	Why
1	Marketing	Takes over content engine so you focus on product
2	Customer Support	Takes over DMs and onboarding
3	Design	Makes product credible enough to charge for

4	Part-time Finance/ Legal	Gets compliance off your plate once revenue starts

FINAL The 8 Sell-Ability Factors

Factor	Action Now
Financial Performance	Track MRR, churn, LTV, CAC from month 1
Growth Potential	Document expansion plan — new cities, new segments
Over-Dependence	No single customer >15% of revenue
Cash Flow	Push annual subscriptions over monthly
Recurring Revenue	Subscription is the core business model
Unique Value Prop	Own apartment ranking in your city before expanding
Customer Satisfaction	Measure NPS and CSAT from the beginning
Management Team	Hire and document roles so business runs without you

"A company that can be sold is a company that can be run without you." — Built to Sell
"You will have to exit. You can choose how and when, but not if." — Finish Big
